

RBN Crude Voyager

Comprehensive U.S. Crude Export Analysis

RBN Energy *Crude Voyager*

RBN Energy's newest voyager report covers the hottest commodity in the U.S. Gulf Coast export market: crude oil. After a nearly 40-year ban on oil exports was lifted at the end of 2015, the export activity from terminals in Houston, Beaumont, Corpus Christi and Louisiana has flourished – and will only grow from here. Our weekly report, distributed Tuesday mornings, gives market players, analysts and operations personnel an in-depth look at Gulf Coast crude exports. The *Crude Voyager* also comes with a quarterly supplement, which provides a detailed look at individual ports and new expansion projects.

What's Included:

- 1 Weekly PDF Report**
Concise analysis of U.S. Gulf Coast loading activity explains the ebbs and flows of crude loadings, destinations, and geopolitical issues impacting U.S. exports.
- 2 Quarterly PDF Report**
An update of all the developments in crude-export terminals, including port depths, terminal capacities and offshore projects.
- 3 Optional Weekly XLS Data File**
Hundreds of direct port and reverse-lightered tanker loads by vessel, terminals, charter, destination, class, and more.

Our weekly Report Provides Terminal-by-Terminal Break-Downs of U.S. Crude Loadings.

A quick glance at the *Crude Voyager's* executive summary gives a comprehensive overview of U.S. Gulf Coast terminal activity. We break down the total crude exports by terminal each week. Watch our coverage grow as new terminals come on line and develop export operations. Our comprehensive tallies of U.S. crude exports are accompanied with an Excel file supplement outlining the loading activity of each tanker that picks up oil at the Gulf Coast. Shuttle tankers that move oil to reverse-lightering operations are also included, and when available, its co-loaded ship is also listed. Use our Excel file to enhance analysis and complement demand and inventory models.

Our concise analysis of U.S. Gulf Coast loading activity explains the ebbs and flows of crude loadings, destinations, and geopolitical issues impacting U.S. exports.

RBN Energy analysis delves into ship-to-ship reverse lightering throughout the U.S. Gulf Coast, price impacts to trade flows and other relevant news items impacting arbitrages and market trends. And if you're tired of looking at tables, flip straight to page 3, where we publish the data in a sunburst graphic to give the full story of exports distributions in one glance.

Premium Insights

VLCC Tracker

Reverse-lightered tanker departures, trends in empty VLCC waiting patterns ahead of ship-to-ship transfer receipts, and a monthly look at the country destinations of VLCCs. All reverse-lightered ships hauling U.S. crude cargoes – covering both VLCC and Suezmax vessels – are included with weeks of history.

Waterborne Exports

A week-to-week breakdown of total crude exports by terminal and destination.

Terminal Expansion Project Updates

At the beginning of each quarter, we update all the developments in crude-export terminals. With new project announcements, ownership changes and terminal completions, there's a lot to keep track of.

Excel Data File

Our comprehensive tallies of U.S. crude exports are accompanied with an Excel file supplement outlining the loading activity of each tanker that picks up oil at the Gulf Coast. Shuttle tankers that move oil to reverse-lightering operations are also included, and when available, its co-loaded ship is also listed.

How you benefit

Anticipate shipping schedules and charter trends

Understand current and future market activity

Save time, confirm details, and identify opportunities

Enhanced analysis and complement demand and inventory models
