

RBN NGL Voyager

Tracking U.S. Waterborne Exports

Overview

U.S. NGL production has exploded as producers shifted to liquids-rich basins, but domestic demand has not been able to keep pace. So far, the only way the markets have balanced is through propane exports running at record levels, butane exports moving to new markets, and ethane being exported to overseas markets for the first time. With these new dynamics and future deliveries uncertain, it's clear the tide in NGL markets is changing and only those with a firm grip on evolving market conditions will be able to stay afloat.

The *NGL Voyager* provides subscribers with comprehensive market analysis, driven by fundamentals and explained in the context of the latest industry buzz. It examines exports' origins, destinations, and volumes with historical comparisons. *NGL Voyager* comes out twice a month and is currently available for individual and corporate subscriptions.

Market Insights on Current and Future Activity

Data without clarity and reason can lead to faulty market conclusions. RBN sifts through all the noise to bring the most important topics to light and explains the driving forces behind them.

-Insights to current and future market activity

Interpret Market Shifts with the Latest Waterborne Export Volumes

Current month-to-month breakdown of total Propane, Butane, and Ethane exports by terminal and destination, keeping readers up to two months ahead of EIA figures.

-Accurately interpret market shifts to make informed decisions

Identify Historical Trends and Support In-House Modeling

Bi-weekly updates to historical loading activity for each vessel that departs the U.S. since July 2015.

-Identify Trends and support inhouse models
